## 24. We have entered into related party transactions and may continue to do so in the future.

Our Company has entered into certain transactions with our related parties. While we believe that all such transactions have been conducted on the arms-length basis, there can be no assurance that we could not have been achieved more favorable terms had such transactions not been entered into with related parties. Furthermore, it is likely that we will enter into related party transactions in the future. There can be no assurance that such transactions, individually or in the aggregate, will not have an adverse effect on our financial condition and results of operation.

For details on the transactions entered by us, please refer to "Related Party Transactions" beginning on page no. 121 of this Draft Prospectus.

## 25. Failure to effectively manage labour or failure to ensure availability of sufficient labour could affect the business operations of the Company.

Our business activities are dependent on availability of skilled and unskilled labour. Non-availability of labour at any time or any disputes with them may affect our production schedule and timely delivery of our products to customers which may adversely affect our business and result of operations. We have not entered into any contract for supply of labour and there is no certainty that we will be able to get the requisite amount of manpower whenever required. Though we have not faced any labour problem in the past, we cannot assure that we will not experience disruptions to our operations due to disputes or other problems with our work force, which may lead to strikes, lock- outs or increased wage demands. Such issues could have adverse effect on our business, and results of operations.

## 26. Strikes, work stoppages or increased wage demands by our employees or any other kind of disputes with our employees/workmen in future could adversely affect our business and results of operations.

Our Company has total 31 full-time employees excluding contract labour as at September 30, 2017. With an increase in our operation capacities or execution of any expansion projects in future, we expect increase in such number of employees and labors. ## 28. Our insurance coverage may not be adequate to protect us against certain operating hazards and this may have a material adverse effect on our business.

We are insured for a number of the risks associated with our several businesses, such as insurance cover against loss or damage by fire, earthquake, theft etc. We believe we have got our assets adequately insured; however there can be no assurance that any claim under the insurance policies maintained by us will be honored fully, in part or on time, to cover all material losses. To the extent that we suffer any loss or damage that is not covered by insurance or exceeds our insurance coverage, our business and results of operations could be adversely affected.

# 29. We have not identified any alternate source of raising the funds required for our 'Objects of the Issue'. Any shortfall in raising / meeting the same could adversely affect our growth plans, operations and financial performance.

Our Company has not identified any alternate source of funding and hence any failure or delay on our part to mobilize the required resources or any shortfall in the Issue proceeds can adversely affect our growth plan and profitability. The delay/shortfall in receiving these proceeds may require us to borrow the funds on unfavorable terms, both of which scenarios may affect the business operation and financial performance of the company.

# **30.** There is no monitoring agency appointed by Our Company and the deployment of funds are at the discretion of our Management and our Board of Directors, though it shall be monitored by our Audit Committee.

As per SEBI (ICDR) Regulations, 2009, as amended, appointment of monitoring agency is required only for Issue size above  $\gtrless$  10,000 Lakh. ## 31. Our ability to pay dividends in the future will depend upon future earnings, financial condition, cash flows, working capital requirements and capital expenditures.

Although in the past we have paid dividends, our future ability to pay dividends will depend on our earnings, financial condition and capital requirements. Dividends distributed by us will attract dividend distribution tax at rates applicable from time to time. There can be no assurance that we will generate sufficient income to cover the operating expenses and pay dividends to the shareholders. Our ability to pay dividends will also depend on our expansion plans. We may be unable to pay dividends in the near or medium term, and the future dividend policy will depend on the capital requirements and financing arrangements for the business plans, financial condition and results of operations.

## **32.** We are exposed to the risk of delays or non-payment by our clients and other counterparties, which may also result in cash flow mismatches.

We are exposed to counterparty credit risk in the usual course of our business dealings with our clients or other counterparties who may delay or fail to make payments or perform their other contractual obligations. The financial condition of our clients, business partners, suppliers and other counterparties may be affected by the performance of their business which may be impacted by several factors including general economic conditions. We cannot assure you of the continued viability of our counterparties or that we will accurately assess their creditworthiness. Any material non-payment or non-performance by our clients, business partners, suppliers or other counterparties could affect our financial condition, results of operations and cash flows.

## 33. An inability to effectively manage project execution may lead to project delays which may affect our business and results of operations.

Our business is dependent on our ability to effectively manage the execution of our projects. An inability to effectively manage our operations, including ineffective or inefficient project management procedures could increase our costs and expenses, result in project delays and thereby affect our profitability. The effectiveness of our project management processes and our ability to execute projects in a timely manner may be affected by various factors. Additionally, in some projects, in case of delay due to our fault or because of defective work done by us, clients have the right to rectify the defective work, or engage a third party to complete the work and deduct additional costs or charges incurred for completion of the work from the project price payable to us. Such factors would have an effect on our results of operations and financial condition.

## 34. Difficulties and uncertainties surrounding the implementation of a GST regime in India may adversely affect our business strategy.

The GoI has implemented a comprehensive GST regime which has combined taxes and levies by the central and state governments into a unified indirect tax on the manufacture, sale and consumption of goods and services at a national level. We expect the GST regime to benefit the inter-state movement of services which may lead to opportunities for growth of our business. For further details, see "Industry Overview" and "Our Business" beginning on pages 62 and 69 respectively. In addition, since the GST regime has been implemented, the impact, if any, that implementation of the GST regime will have on our tax liability and other related matters is uncertain. We cannot assure you that the GST regime will not result in levy of certain additional taxes. In the event GST increases our tax liability, our financial condition and results of operations could be affected. In respect of our business, we may experience an increase in our tax liabilities. If these additional taxation expenses are not reimbursed by our clients or if we are not able to obtain suitable relief from the tax authorities, our business, financial condition and results of operations may be affected. For further details of regulation applicable to us, refer chapter titled "Key Industrial Regulation and Policies" beginning on page no. 88 of this Draft Prospectus.

## **35.** There may be potential conflicts of interest if our Promoters or Directors are involved in any business activities that compete with or are in the same line of activity as our business operations.

#### **GLOBAL ENERGY SCENARIO**

Energy in 2016: short-run adjustments and long run transition.

Stability and energy markets don't go together – booms and busts; rebounds and reversals are the norm. But the movements and volatility seen last year were particularly interesting since energy markets were buffeted by two separate forces: the continued adjustment to the short-run cyclical shocks that have rocked energy markets in recent years, particularly the oil market; and the growing gravitational pull of the longer-run energy transition that is under way. In recent years the nature of the cyclical adjustments has been increasingly affected by the longer-run transition that is shaping global energy markets. On the demand side: the shift in the centre of gravity to fast-growing developing economies, led by China and India; together with a slowing in overall energy growth as it is used ever more efficiently. And on the supply side, the secular movement towards cleaner, lower carbon energy sources, led by renewable energy, driven by technological advances and environmental needs. 2016 was a year of both short-run adjustments and long-run transition, and this year's Statistical Review shines a light on both influences.

Primary energy grew by just 1% (171 mtoe) in 2016, almost half the average rate seen over the previous 10 years. Some of this weakness reflected short-run factors: global GDP grew by just 3% last year, its slowest rate since 2002 – other than at the time of the financial crisis – driven in part by a slowdown in industrial production, the most energy-intensive sector of the economy But the weakness is also indicative of the longer run trend towards slower energy growth driven by gains in energy efficiency. This is the third consecutive year in which energy consumption has grown by 1% or less, with energy intensity – the average amount of energy needed to produce a unit of GDP – falling at historically unprecedented rates. Growth in energy consumption was again driven by the developing economies. China (1.3%, 47 mtoe) and India (5.4%, 39 mtoe) led the way, contributing almost identical increments, and together accounting for around half of the increase in global demand.

## **OVERVIEW OF INDIAN SOLAR MARKET**

#### India to be third largest solar market in 2017

With 8.8 gigawatt (GW) of capacity addition projected for the year ahead, India is set to become the third biggest solar market globally in 2017, overtaking Japan, according to the *India Solar Handbook 2017* The report by BTI, a consulting firm in India's clean technology market, said solar capacity in the country is expected to touch 18.7GW by the end of 2017, which is about 5% of global solar capacity. As of March 2017, India had installed 12.2GW of utility scale solar. In June 2015, the government had revised India's solar power target to 100GW from 20GW, by 2022.

# Total new solar capacity addition in the next five years is expected at 56GW". This, however, implies that India would fall short of its 100GW target. About 79GW of solar capacity is expected to be added globally in 2017, with Asian countries continuing to dominate the industry while Europe continues to fall in rankings. In India, the states of Tamil Nadu, Andhra Pradesh and Telangana have emerged as the fastest growing in terms of solar power capacity addition. In 2017 nearly 60% of total new capacity addition is expected to come from the southern states. Indian solar market has grown by an average 72% in the last three years and is now worth approximately 8-9GW per annum. Growing market size and strong government commitment to the sector have attracted the world's leading private sector players as well as resulted in lower tariffs for consumers. As the sector matures, however, there is a formidable new challenge arising in the form of how to absorb rising share of intermittent energy into the grid.

The report also included *Indian Solar CEO Survey* according to which about 45% of the respondents felt that poor net metering implementation remains a major challenge for growth of the rooftop solar market.

## **ROOFTOP SOLAR**

#### **Installation trends**

India's total installed rooftop solar capacity is estimated at 1,247 MW as of December 31, 2016.

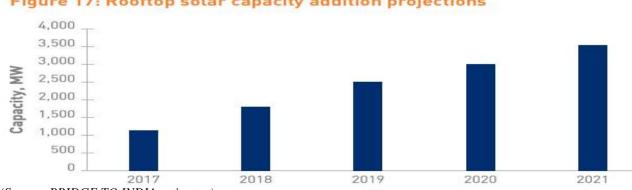

Capital Expenditure (CAPEX) route accounts for nearly 84% of total installed capacity but the Operating Expenditure (OPEX) model has been gaining ground in the last couple of years.

(Source: BRIDGE TO INDIA research)

11.9 GW of new rooftop solar capacity addition is expected in India between 2017 and 2021.

## Figure 17: Rooftop solar capacity addition projections

#### **Policy update**

*Net metering:* 29 states and 7 union territories have notified grid connectivity regulations with provision for net/gross metering but on-the-ground implementation remains patchy.

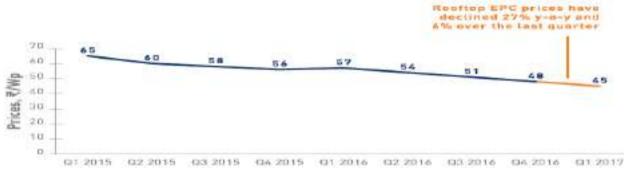

*Subsidy for residential, institutional and government consumers:* Ministry of New and Renewable Energy has sanctioned M 50 billion (\$ 750 million) funding for 30% capital subsidy for rooftop solar for residential and institutional consumer segments. In addition, up to 30% subsidy is also available for government projects.

**Boost in government demand:** Government is expected to become a major demand source for rooftop solar in the coming years. All building facilities under different central government departments are being urged to adopt rooftop solar and a potential of 6 GW capacities has been identified so far. SECI has already announced 500 MW of tenders for such buildings.

*Concessional debt financing:* The Government of India, with assistance from multilateral financial institutions such as Asian Development Bank, The World Bank and New Development Bank, has earmarked US \$ 1,470 million of concessional credit lines for the rooftop solar market.

*Building bye-laws:* The Government of India has recommended mandatory rooftop solar installations for buildings exceeding specified size and/or power consumption thresholds under the model Building Bye Laws. Four states and union territories - Uttar Pradesh, Haryana, Chandigarh and Chhattisgarh - have adopted these regulations so far.

#### GLOBAL ENERGY SCENARIO

Energy in 2016: short-run adjustments and long run transition.

Stability and energy markets don't go together – booms and busts; rebounds and reversals are the norm. But the movements and volatility seen last year were particularly interesting since energy markets were buffeted by two separate forces: the continued adjustment to the short-run cyclical shocks that have rocked energy markets in recent years, particularly the oil market; and the growing gravitational pull of the longer-run energy transition that is under way. In recent years the nature of the cyclical adjustments has been increasingly affected by the longer-run transition that is shaping global energy markets. On the demand side: the shift in the centre of gravity to fast-growing developing economies, led by China and India; together with a slowing in overall energy growth as it is used ever more efficiently. And on the supply side, the secular movement towards cleaner, lower carbon energy sources, led by renewable energy, driven by technological advances and environmental needs. 2016 was a year of both short-run adjustments and long-run transition, and this year's Statistical Review shines a light on both influences.

Primary energy grew by just 1% (171 mtoe) in 2016, almost half the average rate seen over the previous 10 years. Some of this weakness reflected short-run factors: global GDP grew by just 3% last year, its slowest rate since 2002 – other than at the time of the financial crisis – driven in part by a slowdown in industrial production, the most energy-intensive sector of the economy But the weakness is also indicative of the longer run trend towards slower energy growth driven by gains in energy efficiency. This is the third consecutive year in which energy consumption has grown by 1% or less, with energy intensity – the average amount of energy needed to produce a unit of GDP – falling at historically unprecedented rates. Growth in energy consumption was again driven by the developing economies. China (1.3%, 47 mtoe) and India (5.4%, 39 mtoe) led the way, contributing almost identical increments, and together accounting for around half of the increase in global demand.

## **OVERVIEW OF INDIAN SOLAR MARKET**

#### India to be third largest solar market in 2017

With 8.8 gigawatt (GW) of capacity addition projected for the year ahead, India is set to become the third biggest solar market globally in 2017, overtaking Japan, according to the *India Solar Handbook 2017* The report by BTI, a consulting firm in India's clean technology market, said solar capacity in the country is expected to touch 18.7GW by the end of 2017, which is about 5% of global solar capacity. As of March 2017, India had installed 12.2GW of utility scale solar. In June 2015, the government had revised India's solar power target to 100GW from 20GW, by 2022.

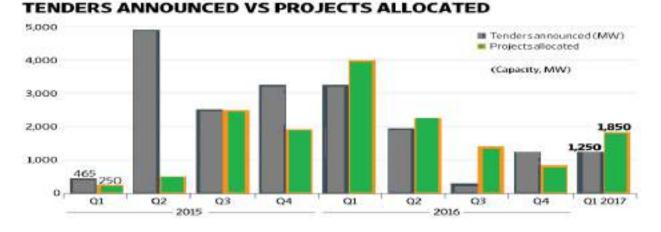

Total new solar capacity addition in the next five years is expected at 56GW". This, however, implies that India would fall short of its 100GW target. About 79GW of solar capacity is expected to be added globally in 2017, with Asian countries continuing to dominate the industry while Europe continues to fall in rankings. In India, the states of Tamil Nadu, Andhra Pradesh and Telangana have emerged as the fastest growing in terms of solar power capacity addition. In 2017 nearly 60% of total new capacity addition is expected to come from the southern states. Indian solar market has grown by an average 72% in the last three years and is now worth approximately 8-9GW per annum. Growing market size and strong government commitment to the sector have attracted the world's leading private sector players as well as resulted in lower tariffs for consumers. As the sector matures, however, there is a formidable new challenge arising in the form of how to absorb rising share of intermittent energy into the grid.

## **Policy update**

*Net metering:* 29 states and 7 union territories have notified grid connectivity regulations with provision for net/gross metering but on-the-ground implementation remains patchy.

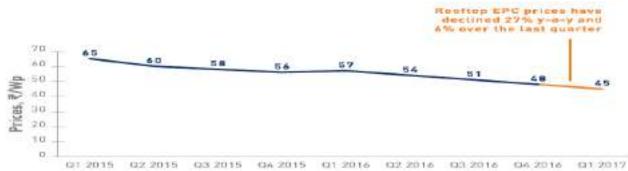

*Subsidy for residential, institutional and government consumers:* Ministry of New and Renewable Energy has sanctioned M 50 billion (\$ 750 million) funding for 30% capital subsidy for rooftop solar for residential and institutional consumer segments. In addition, up to 30% subsidy is also available for government projects.

**Boost in government demand:** Government is expected to become a major demand source for rooftop solar in the coming years. All building facilities under different central government departments are being urged to adopt rooftop solar and a potential of 6 GW capacities has been identified so far. SECI has already announced 500 MW of tenders for such buildings.

*Concessional debt financing:* The Government of India, with assistance from multilateral financial institutions such as Asian Development Bank, The World Bank and New Development Bank, has earmarked US \$ 1,470 million of concessional credit lines for the rooftop solar market.

**Building bye-laws:** The Government of India has recommended mandatory rooftop solar installations for buildings exceeding specified size and/or power consumption thresholds under the model Building Bye Laws. Four states and union territories - Uttar Pradesh, Haryana, Chandigarh and Chhattisgarh - have adopted these regulations so far.

## **OUR CORE PRODUCT'S INDUSTRY OVERVIEW**

#### 1. Photovoltaic Solar Power System

Solar power is one of the most reliable and clean energy resources, and proves to be a viable alternative to fossil fuels that are currently responsible polluting for the environment and contributing to global warming. Solar power is generated through various technologies viz. solar PV, solar thermal, concentrated solar thermal (power), and concentrated PV. all the four In technologies mentioned

above, solar PV is the biggest Solar Power Market: followed by concentrated solar thermal (CSP). In the last five years, solar PV registered 60% average annual growth rate and CSP achieved 8% Currently, the market for solar PV is bigger than CSP; thanks to huge investment, research and development, initiatives taken by the governments and a number of projects in the pipeline However, CSP technologies are expected to grow at a faster rate in future as new markets such as China, India, Brazil. Canada, Germany, and France open up. During 2011 - 2016, the CSP market is expected to grow at a CAGR of 44.9% and the solar PV market by 29.9%.

At the end of 2016, cumulative installed capacity of CSP and solar PV is expected to be 8.6 GW and 219 GW respectively.

The most important factors that stimulate the growth of solar power market on the whole are unpredictable fossil fuel prices, need for disassociation of dependence on fossil fuel imports from areas of political volatility, environmental concerns over the green house gas emissions associated with fossil fuel use, government incentives, other support programs making solar power more cost competitive, and shift in consumer preference.

For Solar Power Market many governments have set clean energy targets, and are trying to achieve them by switching over to renewable energies such as solar. Loads of developments are taking place at the global level; for instance, European countries are focusing the most on both, PV and CSP technology, whereas areas such as Germany, Italy, and Czech Republic have shown substantial growth in terms of PV installation. Spain has observed growth mainly in the CSP market.

Europe is the biggest solar power market; followed by Asia-Pacific and then North America. Germany alone shares almost 44% of the global solar PV market. Spain is one of two countries (U.S. and Spain) getting CSP installations. Asia-Pacific region comes at the second position, only after Europe in the solar energy market with major installation taking place in countries such as China, Japan, and Australia. The rest of the world (ROW) region comprises Brazil, Middle East, and Israel; which are gaining attention from the major players of the PV and the CSP market considering the potential that these regions hold.

In support of strong regulatory environment, at the end of 2010, global solar power constituting solar PV and CSP cumulative installed capacity reached 40.5 GW. In 2010 itself, the capacity increased by 70% from 23.8 GW at the end of 2009. Out of 40.5 GW installed capacity, 39.7 GW was contributed by solar PV only. In 2010, global solar PV's installed capacity grew by 72.6%, a number closed with global solar power installed capacity growth. During 2009, installed capacity of solar power grew by 44% from 16 GW at the end of 2008 to 23.8 GW at the end of 2009. The growth rate rose from 44% in 2009 to 70% in 2010 since investments in solar energy increased with the end of global financial turmoil.

In 2010 for Solar Power Market, Europe contributed the highest in the global market with new installations of 13.4 GW; followed by Asia-Pacific with 2.0 GW and North America with 1.1 GW. The global solar power annual installation is expected to reach 46.8 GW in 2016 from 19.8 GW in 2011 with a CAGR of 18.7% during the same

period. During 2011 – 2016, Rest of the World (ROW) constituting Brazil, Israel, and Middle East will explore solar energy and start installations and will experience a CAGR of 18.8% from 2011 to 2016.

## MARKETS COVERED FOR SOLAR POWER

## 2. Solar Water Heater

The solar segment of the water heater market is firmly in the hands of Un-organized manufacturers or local manufacturers, reason being cheaper Chinese imports. The un-organized players takes the benefit of the price sensitive customers as the basic models they have to offer in the solar segment costs roughly around INR 8500 that is almost half the price as compared to the branded one that goes up to INR 15000. The established players in the segment are Emmvee, Anu Solar, Tata BP and V-Guard, which has little share in the market as compared to the local manufacturers. The electric water heaters is the dominant market as it comes with low ownership cost and lower maintenance, Solar waters have started picking up slowly due to the continuous efforts from the Government and increased awareness amongst the customers to opt for environment friendly products.

#### India Solar Water Heater Market 2017 Share, Trend, Segmentation and Forecast to 2021:

The solar water heaters industry is filled with large numbers of un-organized as well as organized manufacturers. The market has shown immense growth potential resulting into the continuous improvement in the products by the organized as well as un-organized segment. The un-established business units enjoy more than half of the solar water heater market share, as they are able to offers the products at highly competitive price, which is almost half the price from organized segment. The major organized players in the segment are Emmvee, Anu Solar, Tata Solar, Racold, and V-Guard, which have significant share in the market, but the lions share in the segment is acquired by huge unorganized segment in the country.

The solar water heaters are the driving technology in the water heater industry. With the depleting non-renewable in the world, the authorities are pushing the consumers to go solar. The government is also trying to convert the already installed water heaters to be converted to solar type water heaters. As the population is increasing, so is the demand for power leading to the consumption of more electricity. With the depletion of existing non-renewable, the renewable energy comes out to be the only solution. Therefore, it is expected that the market for the solar water heaters will lead the water heater market globally. The only factor that dents the solar segment is high cost of ownership from the

organized market and lower quality from the un-organized market that in turn increases the maintenance cost. With innovations going in the industry, it will offer the bunch of products that will be able to cater the needs of the customers.

## 3. Diesel and Gas Generator Sets

## India Diesel Genset Market (2018-2023)

According to 6Wresearch, India diesel genset market is projected to grow at a CAGR of 4.5% during 2018-23. In India, diesel gensets with rating 5KVA-75KVA accounted for majority of the market share due to ease of availability, low cost and wide range of usage across various applications. The 5KVA-75KVA rating genset market is expected to maintain its market dominance throughout the forecast period. Utilization of these gensets across power telecom infrastructure in unreliable and offgrid areas would drive the market. According to Ravi Bhandari, Assistant Manager, 6Wresearch, "During last couple of years, diesel genset market in India registered a sluggish growth due to improved power demand-supply situation especially in the 5-75KVA rating segment".

"Further, with the adoption of alternative fuel powered genset and increasing generation of electricity from solar power have affected the growth of the market during this time frame. However, in the forecast period, 'Make in India' campaign, smart cities project, expansion of public & private infrastructures would fuel diesel genset market in India", **Ravi added**.

According to Prakhar Srivastava, Research Analyst, Research and Consulting, 6Wresearch, "In 2014, the government introduced new emission norms which increased the prices of diesel gensets throughout the country. Also, with these norms, share of unorganized market declined along with the import of low rating genset from China".

"In India diesel genset market, 5 KVA-75 KVA segment has generated key revenue share in the overall market. Over the next six years, share of medium and high rating genset is expected to increase on account of deployment in manufacturing sector and usage in infrastructure development activities"

Large scale metro projects and airport projects such as Navi Mumbai International Airport (NMIA) and Delhi metro expansion projects are expected to fuel the growth of high KVA rating diesel genset market in the country. Also, states such as Uttar Pradesh, Delhi, Bihar, Maharashtra and Telangana are generating key market demand. The major companies in India diesel genset market include- Cummins, Kirloskar, Mahindra and Caterpillar.

"India Diesel Genset Market (2018-2023)" provides in-depth analysis with 69 figures and 35 tables covered in more than 170 pages. ## **OUT SPECTRUM OF SERVICES/PRODCUTS**

## 1. <u>SOLAR PHOTOVOLTAIC ROOF</u> <u>TOP SOLUTION</u>

In grid-interactive system (includes on-grid and grid interactive system), the DC power generated from solar PV panels is converted to AC power using power conditioning unit and is fed to the grid depending on the system installed at institution, commercial establishment or, residential complex.It used to generate power during the daytime which is utilized fully by powering the captive loads and feeding excess power to the grid as long as grid is available. In cases, where solar power is not sufficient due to cloud cover etc. the captive loads are served by drawing power from the grid. The grid-interactive rooftop solar PV systems thus work on 'netmetering' basis wherein the beneficiary pays to the utility on net meter reading basis only. Ideally, grid interactive systems do not require battery backup as the grid acts as the back-up for feeding excess solar power and vice-versa. However, to enhance the performance reliability of the overall systems, a minimum battery-back of one hour of load capacity is strongly recommended.

# 2. <u>SOLAR PHOTOVOLTAIC GROUND</u> <u>MOUNTED SOLUTION</u>

MW scale solar power plant is bunch of solar photovoltaic panels lying across vast field, strategically located to generate day time solar electricity to feed it into the existing transmission network. MW scale power plant is getting popular in India as Government is promoting PPA (Power Purchase Agreement) scheme to install such power plants in unused land. It will decentralized the electricity generation and considerably reduce the transmission losses of Nationalized grid. With abundant sunlight 300 days in a year, cost advantage in the production of solar cells and modules, and the impetus provided by the rolling out of Jawaharlal Nehru National Solar Mission (JNNSM) by the central government and followed upon by many state governments. Today India has a huge opportunity to become a solar super power. Well-defined government policies are offered by the Central Electricity Regulatory Commission (CERC) for gridconnected solar projects are the prime attraction for setting up solar Photovoltaic (PV) farms. Hot destinations are Rajasthan, Gujarat, Maharashtra. Madhya Pradesh. Andhra Pradesh, Karnataka and Tamil Nadu as far as solar radiation is concerned. The ROI is dependent upon many financial parameters like the cost of debt, depreciation, the capacity utilization factor, which, in turn, is dependent on the solar resource at the site and the technology adopted (c-Si or thin-film solar), tariff, etc. Using standard numbers and assuming the technology used will be crystalline silicon, under the National Solar Mission incentive structure, the ROI period for a solar PV power plant is approximately six years. That is, the cash flows will recover the equity capital in six years though the loans could take Longer to clear. Return on equity pretax will be about 20 per cent. Project's internal rate of return is about 15.5 percent.

# 3. SOLAR PHOTOVOLTAIC SOLAR PUMPING SOLUTION

Solar-powered pump is a pump running on electricity generated by solar photovoltaic panels or the thermal energy available from collected sunlight as opposed to grid electricity or diesel run water pumps The operation of solar powered pumps is more economical mainly due to the lower operation and maintenance costs and has less environmental impact than pumps powered by an internal combustion engine (ICE). Solar pumps are useful where grid electricity is unavailable and alternative sources (in particular wind) do not provide sufficient energy. Solar powered water pumps can deliver drinking water as well as water for livestock or irrigation purposes. Solar water pumps may be especially useful in small scale or community based irrigation, as large scale irrigation requires large volumes of water that in turn require a large solar PV array. This is basically a standalone system which consists of a Photovoltaic Module, pumps and mounting structure.

# 4. SOLAR THERMAL SOLAR WATER HEATER SOLUTION

Solar water heaters use the solar energy from the sun to generate heat (not electricity) which can then be used to heat water for showering, space heating, industrial processes or even solar cooling. Solar energy is the primary energy source for our planet as it is responsible for providing energy for plant growth and providing the warmth that makes our planet habitable. While solar water heater devices have been around for over 100 years, the last 20 years have seen significant advances in absorber coating technologies, resulting in solar collectors that

can reliably convert >50% of available sunlight for domestic hot water supply. A solar water heater is one of the most effective ways of cutting a household's carbon footprint by reducing reliance on dirty fossil fuel usage. By offsetting the use of electricity, gas or heating oil, using solar water heaters can also provide financial savings by reducing energy costs. We can get warm water instead of hot water in monsoon season. The temperature rise inside the vacuum tubes is independent of the ambience temperature. The electric backup heater can be used when there is need of additional water for more persons.

The Diesel Generator comprises of Diesel Engine coupled with electric alternator or generator mounted on a common skid.

The Gas Generator comprises of Gas Engine coupled with electric alternator or generator mounted on a common skid. In majority cases it also contains the acoustic enclosure.

The Diesel or Gas engine acts as a prime mover and with help of fuel it rotates the electric generator or alternator and produce electric power. Based on the fuel it used, it is classify as Diesel or Gas generator set.

The Diesel or Gas generator can be used as primary source of electric power when the grid connection is not available or it can be standby source of power to back up with grid.

As per current law diesel generators up to 800 KW capacities shall be fitted with acoustic Enclosures to prevent the noise pollution.

#### Goods and Service Tax (GST)

Goods and Services Tax (GST) is levied on supply of goods or services or both jointly by the Central and State Governments. It was introduced as The Constitution (One Hundred and First Amendment) Act 2017 and is governed by the GST Council. GST provides for imposition of tax on the supply of goods or services and will be levied by center on intra-state supply of goods or services and by the States including Union territories with legislature/ Union Territories without legislature respectively. A destination based consumption tax GST would be a dual GST with the center and states simultaneously levying tax with a common base. The GST law is enforced by various acts viz. Central Goods and Services Tax Act, 2017 (CGST), State Goods and Services Tax Act, 2017 (IGST), Union Territory Goods and Services Tax Act, 2017 (IGST), and Goods and Services Tax (Compensation to States) Act, 2017 and various rules made there under.

Small taxpayers with an aggregate turnover in preceding financial year up to ₹ 75 lakhs (50 lakhs in case of special category states) may opt for composition levy. Under GST, goods and services are taxed at the following rates, 0%, 5%, 12% and 18%. There is a special rate of 0.25% on rough precious and semi-precious stones and 3% on gold. In addition a cess of 15% or other rates on top of 28% GST applies on few items like aerated drinks, luxury cars and tobacco products. GST has replaced following indirect taxes and duties at the central and state levels.

#### **RESTRICTIONS ON FOREIGN OWNERSHIP OF INDIAN SECURITIES**

Foreign investment in Indian securities is regulated through the Industrial Policy, 1991 of the Government of India and FEMA. While the Industrial Policy, 1991 prescribes the limits and the conditions subject to which foreign investment can be made in different sectors of the Indian economy, FEMA regulates the precise manner in which such investment may be made. Under the Industrial Policy, unless specifically restricted, foreign investment is freely permitted in all sectors of Indian economy up to any extent and without any prior approvals, but the foreign investor is required to follow certain prescribed procedures for making such investment. Foreign investment is allowed up to 100% under automatic route in our Company.

India's current Foreign Direct Investment ("FDI") Policy issued by the Department of Industrial Policy and Promotion, Ministry of Commerce and Industry, GOI ("DIPP") by circular of 2015, with effect from May 12, 2015 ("Circular of 2015"), consolidates and supersedes all previous press notes, press releases and clarifications on FDI issued by the DIPP. The Government usually updates the consolidated circular on FDI Policy once every Year and therefore, Circular of 2015 will be valid until the DIPP issues an updated circular.

The transfer of shares by an Indian resident to a Non-Resident does not require the prior approval of the FIPB or the RBI, provided that (i) the activities of the investee company are under the automatic route under the Consolidated FDI Policy and transfer does not attract the provisions of the SEBI (Substantial Acquisition of Shares and Takeovers) Regulations, 2011; (ii) the non-resident shareholding is within the sectoral limits under the Consolidated FDI Policy; and (iii) the pricing is in accordance with the guidelines prescribed by SEBI/RBI. Further, in terms of the Consolidated FDI Policy, prior approval of the RBI shall not be required for transfer of shares between an Indian resident and person not resident in India if conditions specified in the Consolidated FDI Policy have been met. The transfer of shares of an Indian company by a person resident outside India to an Indian resident, where pricing guidelines specified by RBI under the foreign exchange regulations in India are not met, will not require approval of the RBI, provided that (i) the original and resultant investment is in line with Consolidated FDI policy and applicable foreign exchange regulations pertaining to inter alia sectoral caps and reporting requirements; (ii) the pricing is in compliance with applicable regulations or guidelines issued by SEBI.

As per the existing policy of the Government of India, OCBs cannot participate in this Issue.

The Equity Shares have not been and will not be registered, listed or otherwise qualified in any other jurisdiction outside India and may not be offered or sold, and Applications may not be made by persons in any such jurisdiction, except in compliance with the applicable laws of such jurisdiction, except in compliance with the applicable laws of such jurisdiction.
